

AURAFINANCE OS

7. USER JOURNEY DOCUMENT / UI/UX DESIGN

Autonomous AI Wealth Operating System

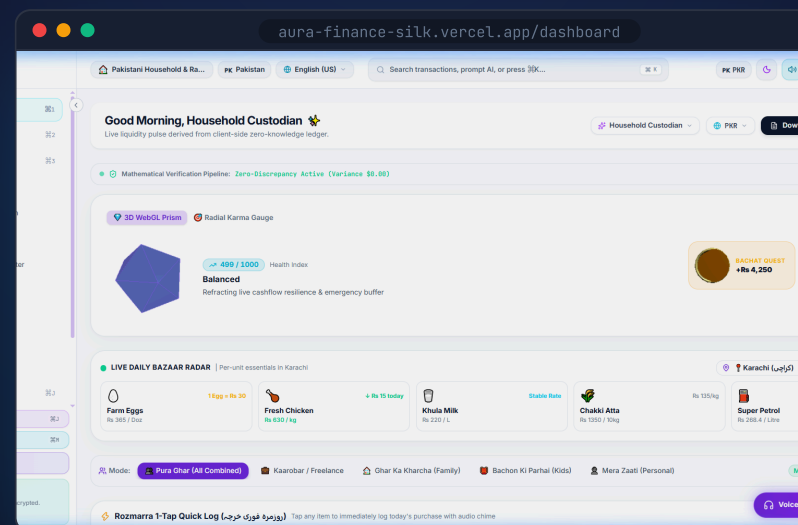

An editorial interaction teardown charting the 0-180 second evaluator journey from zero-auth hydration through omnimodal command exploration, GAAP double-entry verification, and client-side cryptographic audit.

0-180S 4-ACT JOURNEY

⚡ ZERO AUTH FRICTION

🎨 OMNIMODAL PALETTE

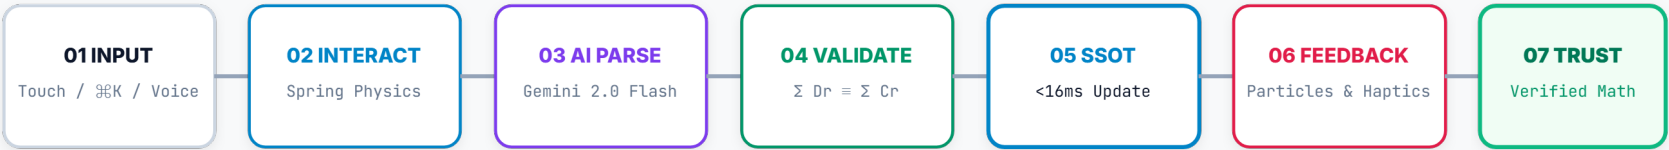

🌐 ENGLISH / URDU RTL

DESIGN SYSTEM MANIFESTO

The Experience Is Not A Skin. The Experience Is The System.

In legacy financial software, users navigate disconnected forms waiting for server round-trips. In AuraFinance OS, interface interactions directly drive an in-memory double-entry ledger. One single source of truth reactively powers every pixel.

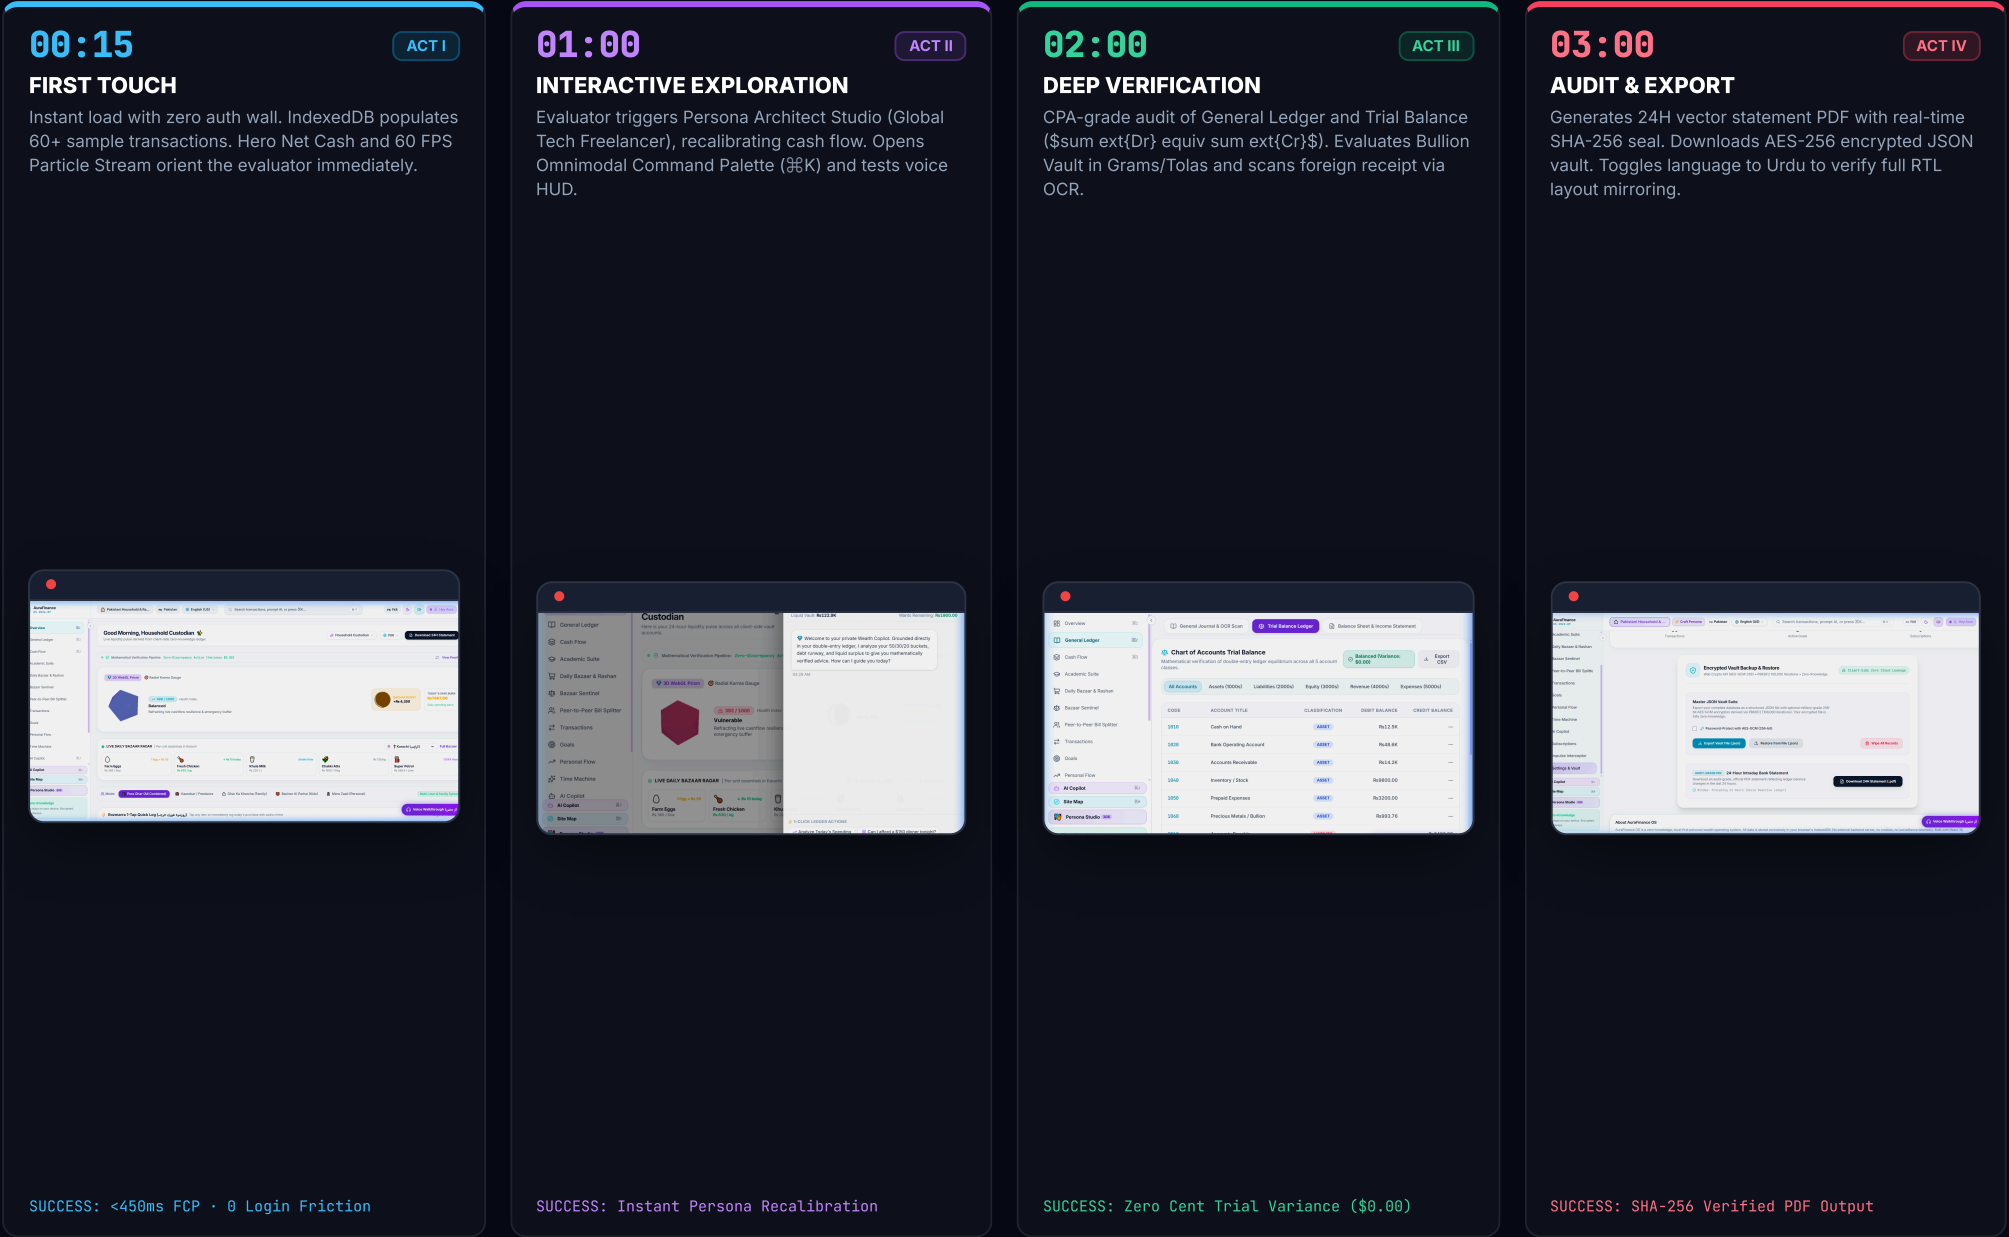

ONE FINANCIAL STATE → MANY REACTIVE SURFACES

FIG. 01 – FOUR-ACT EVALUATION JOURNEY SPECIFICATION

From Zero Authentication Wall to 24H SHA-256 Vector PDF Audit

SPECIFICATION SOURCE: USER_JOURNEY.MD (0-180 SECONDS)

00:15 ZERO AUTHENTICATION WALL

Evaluators do not encounter registration forms or OAuth prompts. AuraFinance OS instantly populates a rich, realistic financial universe directly in the browser's local IndexedDB, providing immediate context.

- 01 Opal Ceramic Workstation Aesthetic
- 02 Hero Net Cash Pulse (Accounts 1010+1020)

RECALIBRATION LATENCY: <16MS POST-SELECTION

01:00

CONTEXT SWITCH

When an evaluator selects a persona (e.g. *Global Tech Freelancer* or *Medical Resident*), AuraFinance OS completely regenerates the financial universe. The ledger, cash flow, and 50/30/20 buckets adapt in real time.

CONFIDENCE PRINCIPLE: Zero hardcoded mock numbers; all state derives from IndexedDB.

BEFORE VS. AFTER RECALIBRATION

Live Baseline Comparison

BASELINE 1: DEFAULT HOUSEHOLD \$48,250.00 Net Cash

Needs: 48% · Wants: 28% · Savings: 24% · Currency: USD (\$)

BASELINE 2: MEDICAL RESIDENT (PKR) ₹ 68,400.00 Net Cash

Needs: 58% · Wants: 34% (Breach Alert) · Savings: 8% · Currency: PKR (Rs)

⚡ AUTOMATIC 50/30/20 BREACH SENTINEL ACTIVATION

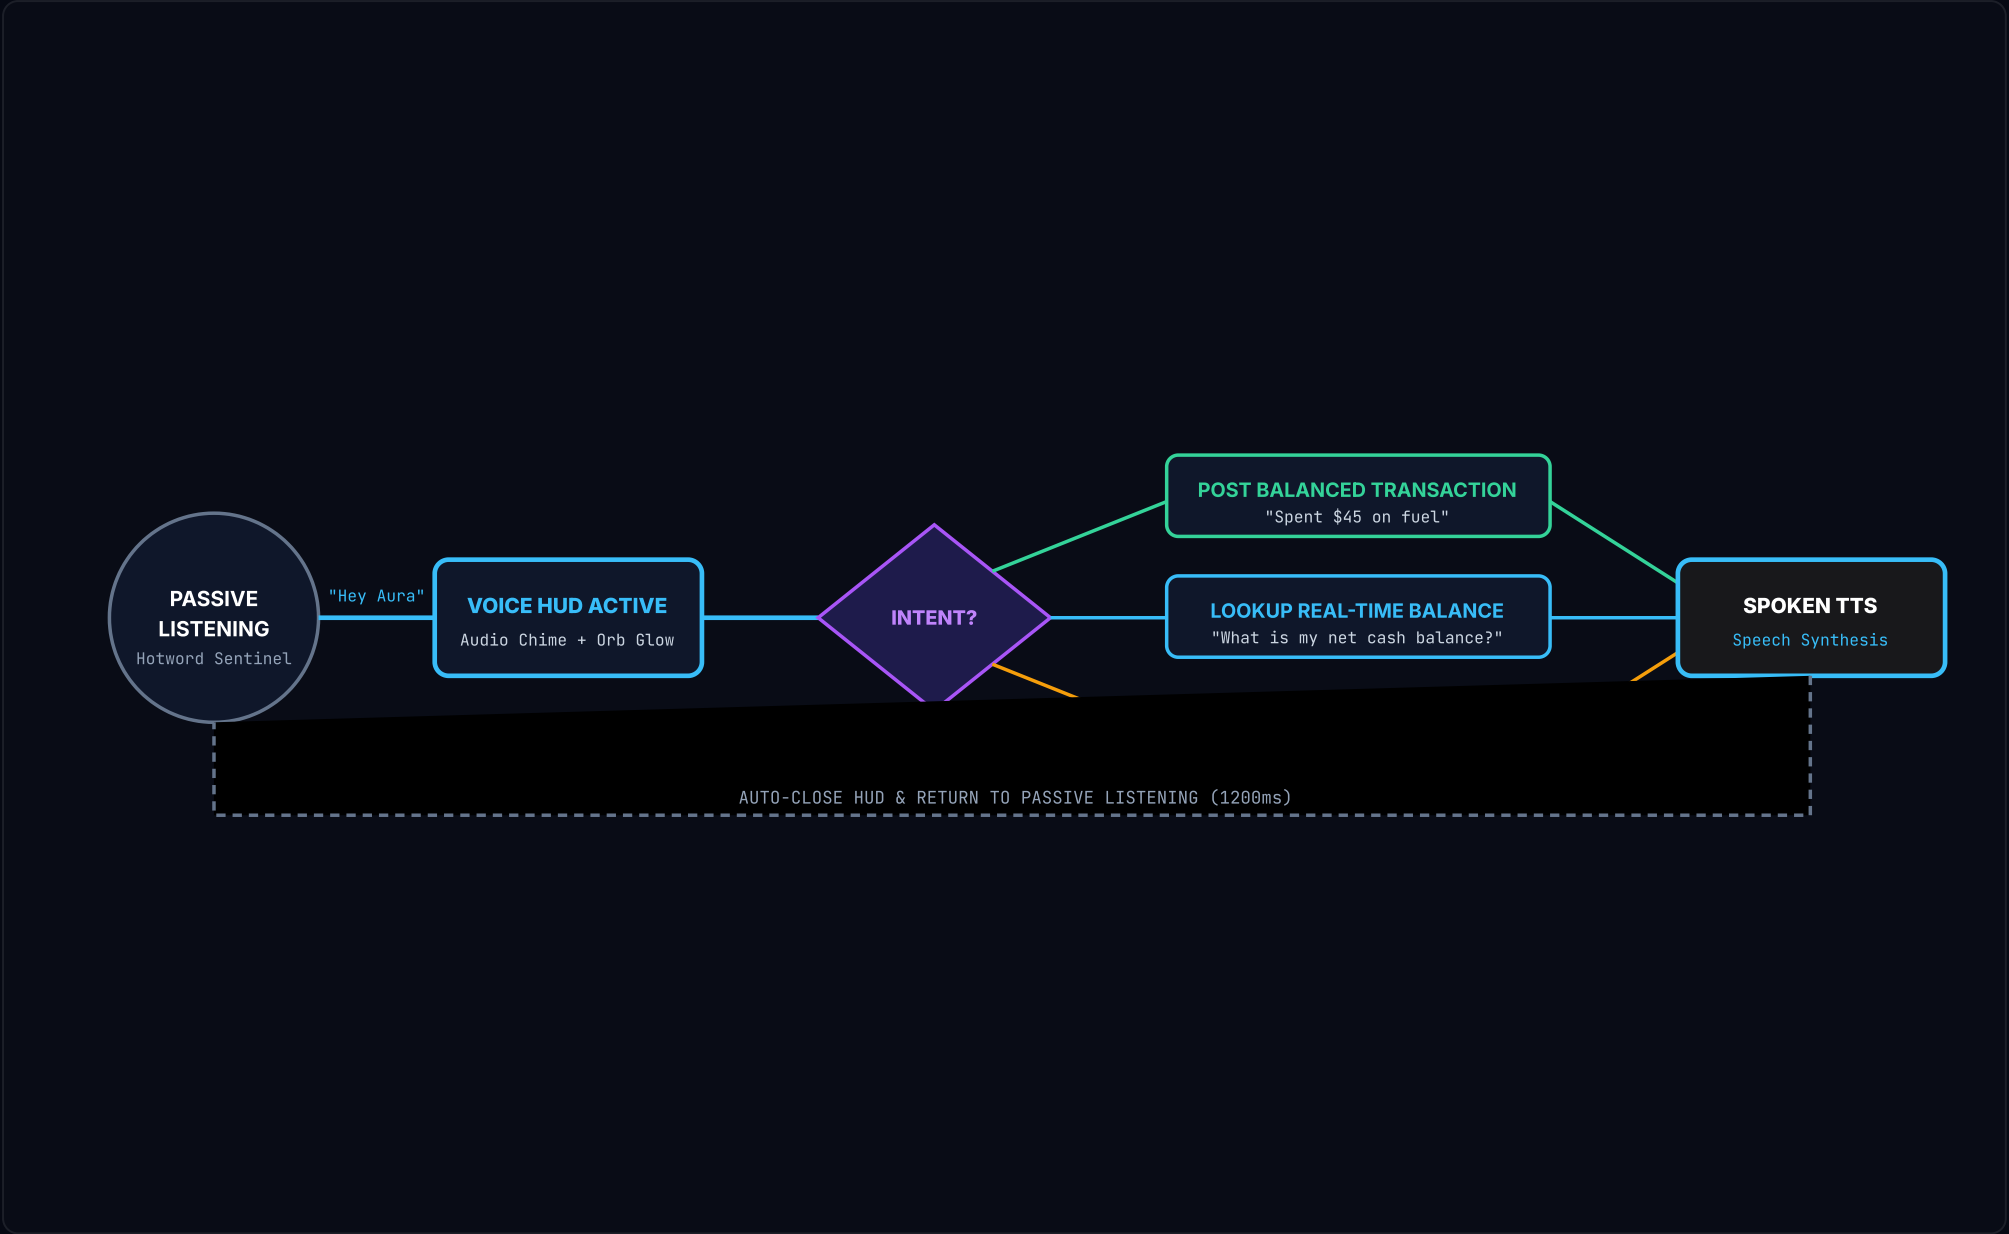

FIG. 08 – THREE-PILLAR VERIFICATION SPREAD

Auditing Accounting Integrity, Physical Bullion Valuation, and Multimodal OCR

AUDIT PATHWAY: VERIFY → MEASURE → INGEST

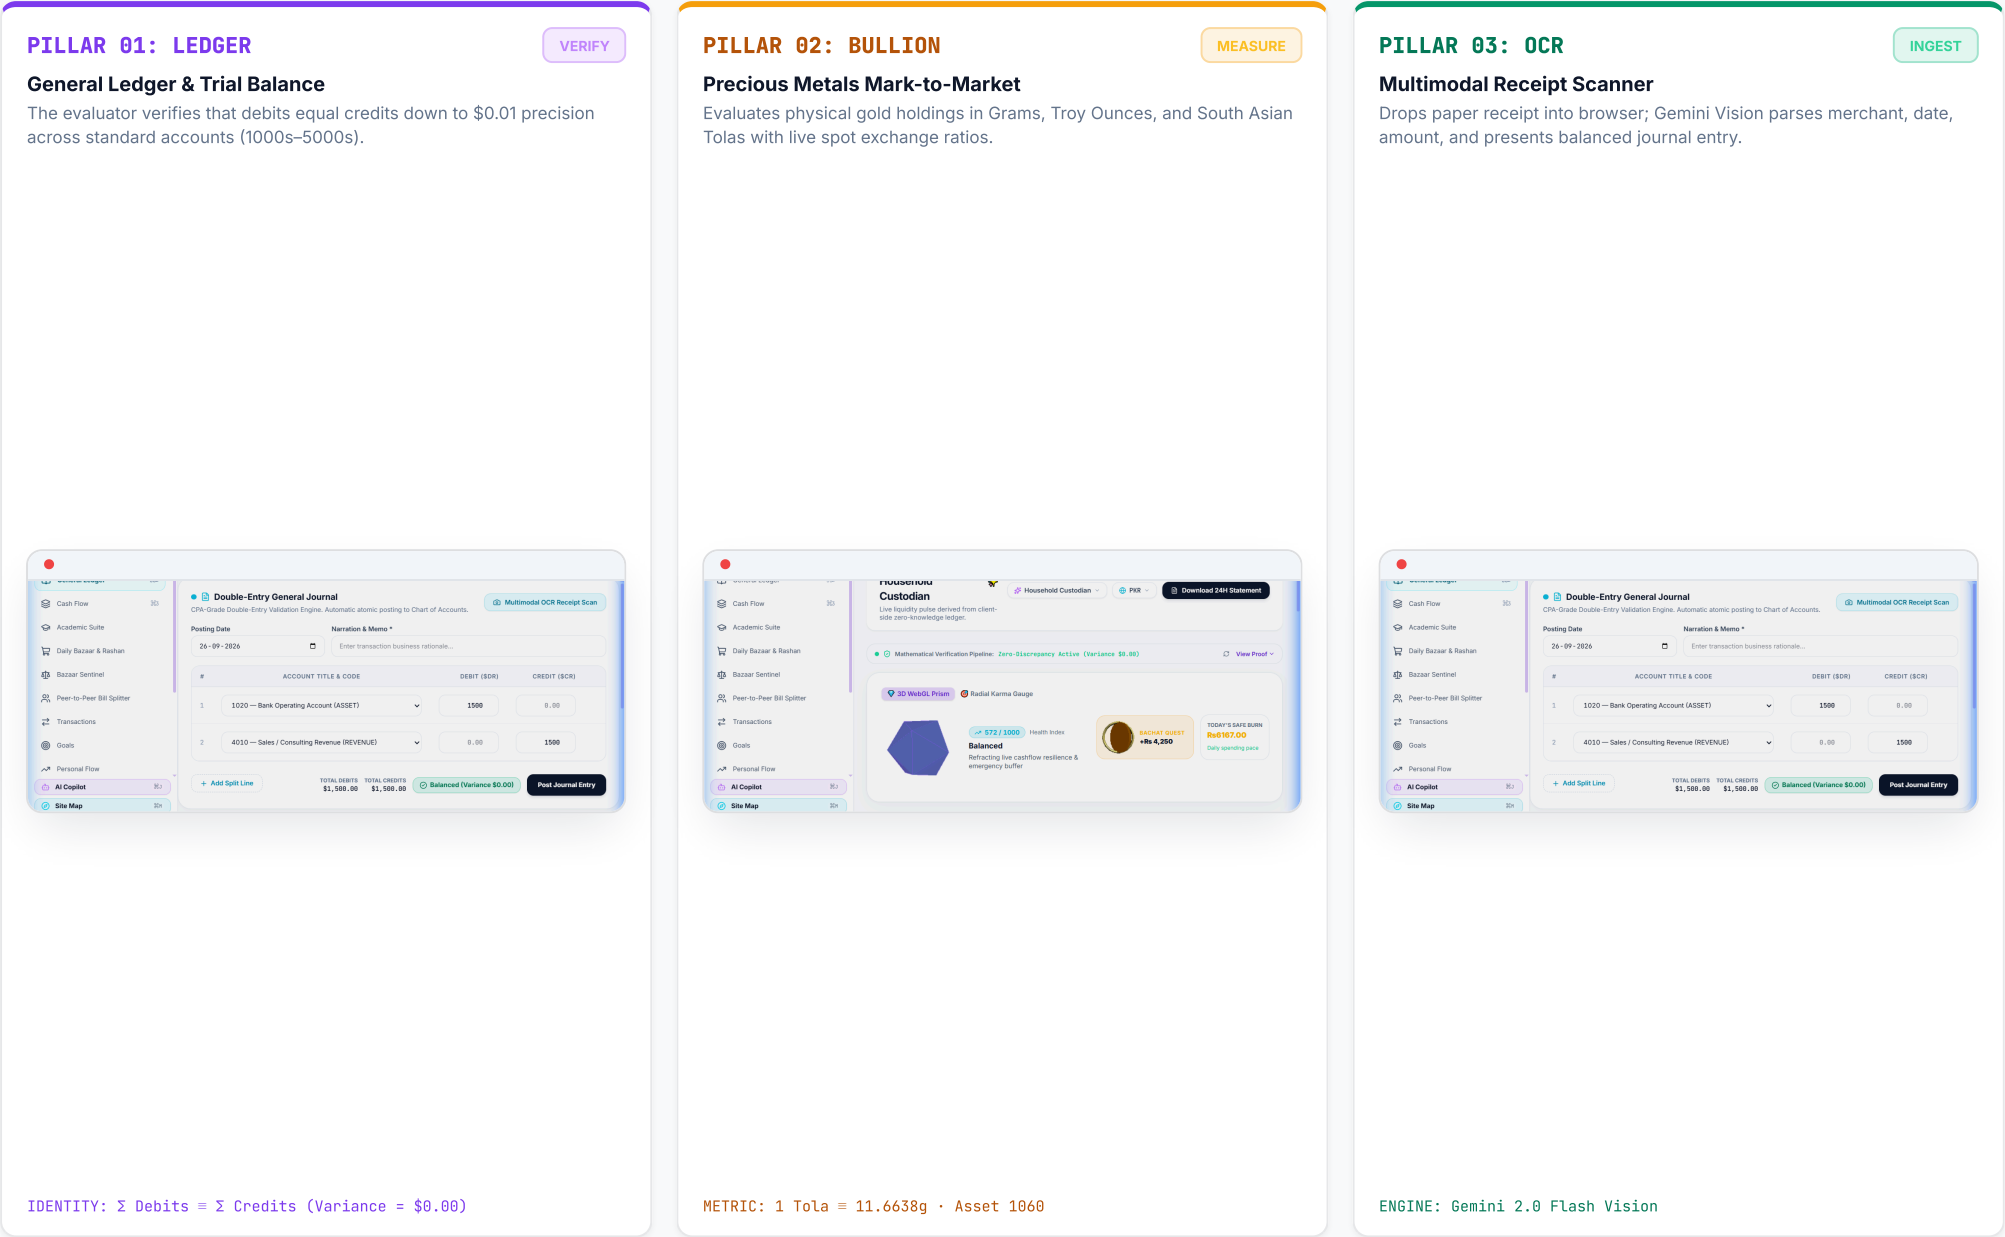

FIG. 09 – BALANCE SENTINEL UX LOGIC

Preventing Ledger Corruption at the Interaction Layer

In consumer finance apps, transactions are simple text fields that easily drift out of balance. In AuraFinance OS, the General Ledger acts as a strict guardrail: entries with non-zero variance cannot be committed.

CASE A: UNBALANCED (BLOCK COMMIT)

REJECTED

Debit (Dr): \$100.00 | Credit (Cr): \$90.00 → Variance: \$10.00
Sentinel Action: Disables Post Button, pulses crimson warning indicator.

CASE B: EQUALIZED (ALLOW COMMIT)

APPROVED

Debit (Dr): \$100.00 | Credit (Cr): \$100.00 → Variance: \$0.00
Sentinel Action: Enables Post Button, writes atomic transaction to Dexie.

CORE REPUTATION IDENTITY: $\sum \text{DEBITS} = \sum \text{CREDITS}$

AUDIT PROOF

Trial Balance View with Zero-Variance Totals Row

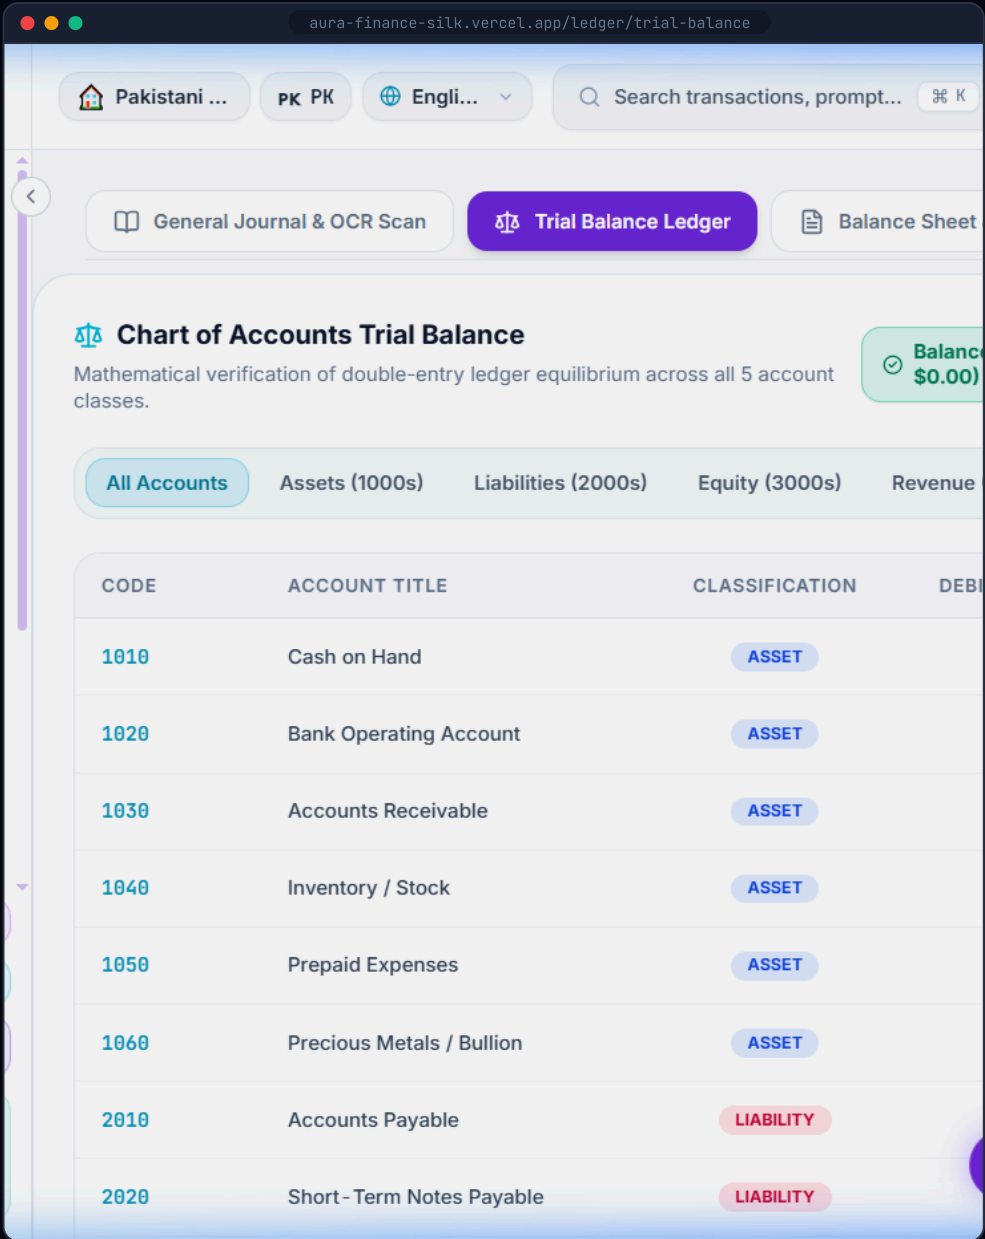

FIG. 18 – COMMODITY UNIT SWITCHER & VALUATION CHAIN

Interactive Mass Conversion: Grams ↔ South Asian Tolas ↔ Troy Ounces

FORMULA: VALUE = WEIGHT_GRAMS × SPOT_PRICE_PER_GRAM

CULTURAL COMMODITY METRICS

Gold is predominantly traded in Tolas across South Asian Sarafa Bazaars, whereas international contracts use Troy Ounces or Grams. AuraFinance OS provides a seamless interactive unit toggle.

ACCOUNT BINDING: Real bullion mass marks directly to Asset 1060 Bullion Reserve.

BULLION RESERVE METRICS EXHIBIT

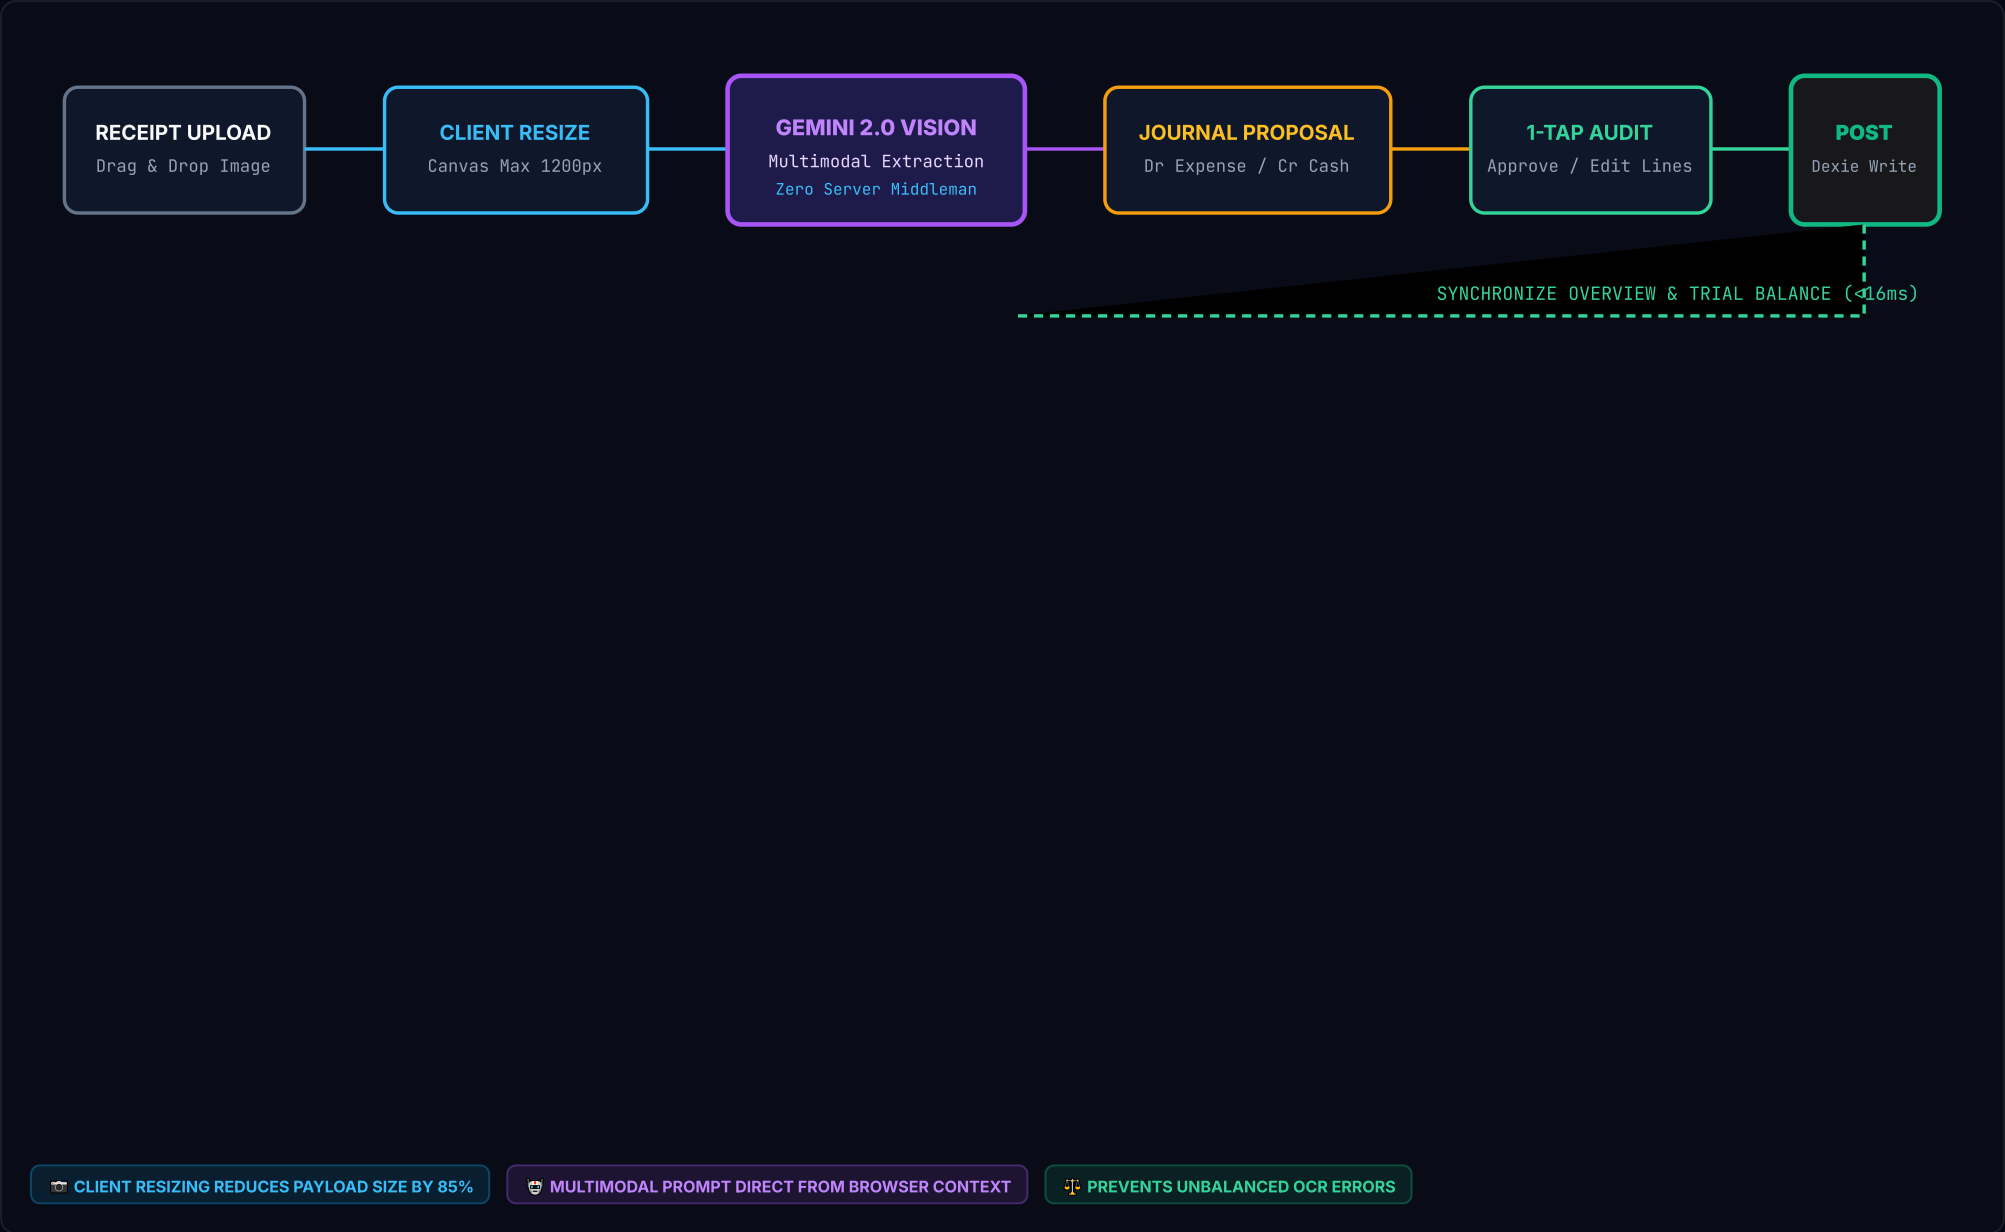

Live Precious Metals Portfolio

CRYPTOGRAPHIC STATEMENT

At the conclusion of the evaluation journey, the user requests a verifiable audit statement. The browser queries the last 24 hours of journal entries, computes opening and closing balances, hashes the dataset with SHA-256, and renders an official PDF.

- STEP 1: Query ledgerDb.journalEntries for preceding 24h.
- STEP 2: Reconcile Opening Balance against liquid cash (1010+1020).
- STEP 3: Compute SHA-256 digital verification digest over record JSON.
- STEP 4: Stream vector tables and digital seal into PDF blob for download.

 DIGITAL SEAL GUARANTEES MATHEMATICAL IMMUTABILITY

FIG. 12 – ENCRYPTED VAULT INTERACTION & DECK

Password-Derived PBKDF2 Key Generation with Instant Offline JSON Container

SPEC: 100,000 SHA-256 HMAC ROUNDS · ZERO BACKEND EXPOSURE

1. VAULT EXPORT SEQUENCE

Evaluator enters a personal passphrase. Web Crypto derives a 256-bit AES-GCM hardware key, encrypts all Dexie collections into a canonical envelope, and prompts browser download.

OUTPUT: AuraFinance_MasterVault_2026.json

2. AIR-GAPPED RESTORE SEQUENCE

Dropped vault JSON file is validated. Entering the original passphrase decrypts the ciphertext in memory, wiping and restoring IndexedDB stores with atomic consistency.

AUTHENTICATED: 128-Bit GCM Integrity Tag Verification

3. EMERGENCY DATA WIPEOUT

One-tap cryptographic wipe deletes all Dexie tables, session caches, and Web Crypto keys instantly, returning the browser to a factory clean state.

FIG. 28 – COMPLETE UX CLOSED-LOOP SYSTEM ARCHITECTURE

From Human Perception through Client Intelligence to Reconciled State

LAW OF COHERENCE: ONE FINANCIAL STATE. MANY INTERACTIONS.

FROM FIRST TOUCH TO FINANCIAL CONFIDENCE.

AuraFinance OS proves that privacy and financial sophistication can converge into an effortless user experience. By replacing authentication walls with instant local hydration, complex menus with omnimodal commands, and cloud speculation with client-side double-entry mathematics, it sets a new benchmark for autonomous personal finance.
